

ARCHITECTS + DESIGNERS: ZOOM WITH GALAXY GLASS & STONE

LEARNING OBJECTIVES:

- The history and evolution of Laminated Glass
- The benefits of laminated glass including composition and methods of lamination
- Explore the Safety Standards and regulations
- Learn the various decorative applications that can be used

COURSE OVERVIEW:

Glass is a material often used in Architects + Designers projects due to its sustainability, versatility, and minimal maintenance. With glass being one of the most commonly specified materials in architectural design, this course will guide you through all you need to know regarding the history of laminated glass and its various methods of fabrication. With behind the scenes videos of our warehouse, this course will leave you inspired with new information to use towards innovative designs with glass.
